### A. RISK FACTORS

#### Standard Risk Factors

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- The name of the Scheme does not in any manner indicate either the quality of the scheme or its future prospects and the returns. Investors are therefore urged to study the terms of offer carefully and consult their Investment Advisor before they invest in the Scheme.
- The sponsor is not responsible or liable for any loss or shortfall resulting from the operation of the scheme beyond the initial contribution of Rs.1,00,000 (Rupees One Lac only) made by it towards setting up the Fund.
- The present scheme is not a guaranteed or an assured return scheme.

#### Scheme Specific Risk Factors

1. The scheme will invest predominantly in the schemes of Quantum Mutual Fund. Hence all the risk associated with the underlying schemes, including performance of underlying of the underlying schemes, asset class risk, passive investment risk, indirect taxation risk (applicable on gold investments – Increase / decrease in duties / taxes like Customs duty, Octroi charges, Vat, etc.) etc., will therefore be applicable to this scheme. Any changes in the investment policy or the fundamental attributes of the underlying schemes could affect the performance of the Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying schemes.
2. The NAV's of the Scheme(s) may be affected by the changes in the general market conditions, factors and forces affecting the capital markets in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures, currency exchange rates, changes in the government policies, taxation laws, any other policies, political and economic developments etc.
3. Despite the fact that the underlying portfolio investments of the Scheme will typically be liquid, in the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.
4. The liquidity of the Scheme's investments is inherently restricted by liquidity of Underlying Schemes.
5. Unitholders of the Scheme are not being offered any guarantee / assured returns.
6. Changes in government policy in general and in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme.
7. The investor of the Scheme shall bear the recurring expenses, transaction charges and loads if any of the Scheme in addition to the expenses, transaction charges & loads of the underlying schemes. Hence the investor

under the scheme may receive lower pre-tax returns than that they could have received if they had invested directly in the underlying schemes in the same proportions.

8. The portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes.
9. The changes in asset allocation may result in higher transaction costs.

## **COMMON RISK ASSOCIATED WITH INVESTMENTS IN DEBT AND MONEY MARKET INSTRUMENTS**

Given below are some of the common risks associated with investments in fixed income and money market securities. These risks include but are not restricted to:

### **1. Liquidity and Settlement Risks**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. From time to time, the Scheme will invest in certain debt securities of certain companies, industries, sectors, etc. based on its investment objectives and policies as outlined in this Scheme Offer Document. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event or during restructuring of the Scheme's investment portfolio.

### **2. Investment Risks**

The value of, and income from, an investment in the Scheme can decrease as well as increase, depending on a variety of factors which may affect the values and income generated by the Scheme's portfolio of debt securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in Government and Reserve Bank of India policy, taxation, political, economic or other developments, closure of the Stock Exchanges etc. Different types of securities in which the Scheme would invest as stated in the Scheme Offer Document carry different levels and types of risk. Accordingly the Scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even amongst corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated. The Scheme will endeavour to invest in highly rated securities offering relative yield for the commensurate risks. However the erosion in the value of the investments/portfolio in the case of the capital and financial markets passing through a bearish phase is a distinct possibility.

### **3. Interest Rate Risk**

Changes in interest rate may affect the Scheme's net asset value. Generally the prices of instruments increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities fluctuate more in response to such interest rate changes than short-term securities. Indian debt and government securities markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

#### **4. Credit Risk**

Credit risk or Default risk refers to the risk that an issuer of a fixed income security may default (i.e. the issuer will be unable to make timely principal and interest payments on the security). Because of this risk, debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of fixed income securities will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

#### **5. Re-investment Risk**

Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows.

### **COMMON RISK ASSOCIATED WITH INVESTMENTS IN GOLD**

#### **1. Price Risk:**

Investors returns would be affected on account of movement in gold prices. The investor may lose money over short or long period due to fluctuation in gold prices in response to factors such as economic and political developments, change in interest rates, demand supply fundamentals and perceived trends in bullion prices, market movement and over longer periods during market downturns.

#### **2. Regulatory Risk:**

Any changes in the regulations relating to import and export of gold (including customs duty, sales tax and any other statutory levies) may affect the gold prices and the ability to buy /sell gold.

Whereas the Indian Markets was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in tax laws, changes in SEBI / Stock Exchange / RBI regulations and other applicable laws / regulations could have an effect on such investments and valuation thereof. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.

#### **3. Custody Risk:**

There is a risk that part or all the gold could be lost, damaged or stolen. Access of the underlying gold could also be restricted by natural events or human actions.

### **B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In

case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise / that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund.

The portfolio is reviewed periodically to address any deviations from the aforementioned allocations due to market changes.

#### **Portfolio Rebalancing in case of deviation from Asset Allocation Under Defensive Consideration**

The asset allocation pattern indicated above may change from time to time, depending on liquidity considerations or on account of high levels of subscriptions or Repurchase / Redemptions relative to Scheme size, or upon various defensive considerations including market conditions, market opportunities, applicable regulations and political and economic factors. These proportions may vary substantially depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and only for defensive considerations. In the event of deviations from the above asset allocation table, the Fund Manager will carry out rebalancing within 30 Calendar Days in accordance to para-No. 2.9 of SEBI Master Circular No. SEBI /HO/IMD/ IMD-PoD-1 / P/ CIR / 2023/74 dated May 19, 2023. However, at all the times the portfolio will adhere to the overall investment objectives of the Scheme.

#### **Portfolio Rebalancing in case of Passive Breach**

Pursuant to para-No. 2.9 of SEBI Master Circular No. SEBI /HO/IMD/ IMD-PoD-1 / P/ CIR / 2023/74 dated May 19,2023 In the event of deviation from the above asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the rebalancing shall be done within 30 Business Days. In case the rebalancing is not done within 30 Business Days, then justification in writing including details of efforts taken to rebalance the portfolio shall be place before the Investment Committee. AMCs shall also disclose any deviation from the mandated asset allocation to investors along with periodic portfolio disclosures as specified by SEBI from the date of lapse of mandated plus extended rebalancing timelines.

#### **D. WHERE WILL THE SCHEME INVEST?**

The Scheme will predominantly invest in the units of the Equity, Debt / Money Markets and Gold Schemes of Quantum Mutual Fund.

The following schemes would be used for gaining exposure to particular asset class:

Equity – Quantum Long Term Equity Value Fund, Quantum Nifty 50 ETF, Quantum India ESG Equity Fund  
Debt/ Money Market – Quantum Liquid Fund, Quantum Dynamic Bond Fund  
Gold – Quantum Gold Fund (ETF)

The Units of any other Equity and Debt / Money Markets scheme launched by Quantum Mutual Fund from time to time would be eligible to be part of the above asset allocation components. Existing Fund of Funds offerings launched by Quantum are currently not permitted for investments in the Scheme. However, as and when permitted by regulations, the same would be considered for allocations under respective asset class and be part of the asset allocation components mentioned under para Asset Allocation.

Although the Scheme aims to invest predominately only in the schemes launched by Quantum Mutual Fund, the Scheme may seek to invest in the units of similar schemes of other mutual fund houses in case of any investment and regulatory constraints that arise that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. This will be applicable to only the debt / money markets schemes that the Scheme invests in to gain exposure to debt as an asset class.

The investments in the units of the underlying Schemes will be made directly with the underlying Schemes and / or through the secondary market. The Scheme will allocate investments dynamically between the units of equity, debt/money markets and Gold schemes of Quantum Mutual Fund.

The Scheme will invest in money market instruments, short term Corporate debt securities, Tri Party Repo and Repo / Reverse Repo in Government securities and treasury bills only as per the prevailing regulations from time to time, only for the purpose of liquidity requirements. The portfolio is reviewed periodically to address any deviations from the aforementioned allocations due to market changes.

#### **E. WHAT ARE THE INVESTMENT STRATEGIES?**

Portfolio allocation between the units of equity, debt/ money markets and gold schemes broadly depends on the relative valuations between the asset classes. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:

1. Price/Earnings Ratio relative to historical averages;
2. The relationship between Earnings Yield to Bond Yield relative to historical averages;
3. Macroeconomic factors prevailing globally, and within India.

The most well-known valuation parameter for equity is the Price-Earnings (P/E) ratio. The estimated earnings of a company are valued at varying multiples that result in a specific but constantly changing price. The P/E multiple is used to determine the current valuation of a stock. Typically, when the P/E ratio exceeds its historical or expected levels the stock moves to an overvalued price. As the P/E ratios of stocks increase over their historical or expected averages, the scheme will look to progressively reduce exposure to equities.

The inverse of P/E ratio is earnings yield: it is the earnings per share of the company, divided by the price per share typically expressed as a percentage. This earnings yield can be compared to the bond yield for assessing the

relative over or under-valuation of stocks with respect to bonds. Earnings yields on stocks should offer investors a premium over bond yields due to the relatively higher risk associated with investing in equity – ownership of bonds give defined coupon payments, while ownership of shares does not guarantee any payments. This is referred to as the equity risk premium. When the equity risk premium falls to levels below historical averages, equities become relatively more expensive over bonds. These relative yields between bonds and stocks will provide key input to the allocation between equity and debt / money market schemes.

Gold has historically acted as an effective portfolio diversifier. It generally tends to have a negative correlation to equities. Based on the above notion, allocation to gold would therefore increase at times when equities appear expensive on a relative basis and decrease at times when equities appear relatively undervalued.

In addition to these market related factors, the macro environment could influence the allocation decisions. The Portfolio/ Investment Team will need to assess RBI monetary policy, various global and domestic lead/ lag economic indicators, inflation trends, and foreign central bank policies and evaluate their impact as the Portfolio/ Investment Team determine the asset allocation between equity/ debt / money markets / gold schemes.

After analyzing some or all the factors mentioned above, the Portfolio/ Investment Team determines the relative allocation to specific equity, debt / money markets and gold schemes. The allocations would be regularly reviewed and necessary portfolio changes would be carried out based on the analysis suggested by various influencing factors.

## **RISK CONTROL / RISK MANAGEMENT STRATEGY**

Risk is an important part of investment function. Effective risk management is critical to fund management for achieving financial goals. Investment made by the Scheme shall be made in accordance with investment objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations, 1996.

The Fund has identified the following Risks and Designed Risk Management Strategy which is the part of the investment process to manage such risks.

<b>Type of Risk</b>	<b>Risk Mitigation / Risk Management Strategies</b>
<b>Liquidity Risk:</b> The liquidity of the Scheme investments is inherently restricted by liquidity of Underlying Schemes. In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.	The Scheme seeks to invest in equity, debt / money markets and gold schemes of Quantum Mutual Fund. The underlying investments held by these schemes are highly liquid and therefore result in high liquidity of the underlying schemes. In the Quantum Long Term Equity Fund which has high liquidity criteria for stocks which make the underlying investments extremely liquid. Quantum Gold Fund invests in physical gold which is also an extremely liquid market. Quantum Index Fund invests in stocks comprising the Nifty 50 index which are also highly liquid. Quantum Liquid Fund also invests in liquid short term debt instruments.
<b>Price Risk:</b> As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets. The NAV's of the Scheme(s) may be affected by the changes in the general market conditions, factors and forces	The Scheme seeks to lower risk by diversifying across asset classes' viz., Equity, Debt / Money Markets and Gold. The low to negative correlation amongst the asset classes tends to lower the price risk. Also, periodical rebalancing helps to maintain the diversification and avoid over / under exposure to a particular asset class than optimally required.

Type of Risk	Risk Mitigation / Risk Management Strategies
affecting the capital markets in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures, currency exchange rates, changes in the government policies, taxation laws, any other policies, political and economic developments etc.	
<p><b>Allocation Risk:</b> The returns and risk of the Scheme depends on the right mix of allocation of funds across asset classes in an optimal way so as to maximize risk adjusted performance of the Scheme. The Scheme also needs to rebalance at regular intervals to maintain the optimal allocation.</p>	<p>The Scheme would strategize its allocation based on relative valuation models and other macro-economic factors influencing each asset class. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:</p> <ol style="list-style-type: none"> <li>1. Price/Earnings Ratio relative to historical averages</li> <li>2. The relationship between Earnings Yield to Bond Yield relative to historical averages</li> <li>3. Macroeconomic factors prevailing globally, and within India</li> </ol> <p>In addition to these market related factors, the macro environment could influence the allocation decisions. The Portfolio / Investment Team will need to assess RBI monetary policy, various global and domestic lead / lag economic indicators, inflation trends, foreign central bank policies and evaluate their impact as the Portfolio/ Investment Team determine the asset allocation between equity / debt / money market / gold Schemes.</p> <p>After analyzing some or all the factors mentioned above, Portfolio/ Investment Team determines the relative allocation to specific equity, debt / money markets and gold schemes. The allocations would be regularly reviewed and necessary portfolio changes would be carried out based on the analysis suggested by various influencing factors.</p> <p>The portfolios will be critically reviewed on a periodic basis to assess the current portfolio allocations. Any decisions to change the prevailing allocations will be taken based on prevalent market conditions and the changing macro business environment.</p>

Type of Risk	Risk Mitigation / Risk Management Strategies
<b>Associated with Gold</b>
