## Quantum Dynamic Bond Fund (QDBF)

- In the monetary policy on June 7 2016, the important market metric to track will be RBI's assessment on recent spike in Food inflation and Oil prices. CPI inflation for May is expected to come around 5.7 % levels due to higher prices of pulses, vegetables and increase in petrol and diesel prices.
- We expect RBI to leave the Repo rate unchanged at 6.5% but maintain its accommodative and thus its view on further Open Market Purchases to bring the system liquidity into neutral mode will be keenly watched by the bond markets.
- The Debt market started the week on a bearish note due to expectation of U.S Fed Reserve hiking rates in June or July meeting. OMO auctions continued to see nationalized Banks offloading securities to RBI at 3 to 5 basis point higher compared with prevailing market rates.
- But US Non-farm payroll data came in at 38,000 versus expectation of additions of 164,000 for the month of May 2016 and after this data, ten year US yields fell from 1.84 % to 1.70 % levels and the dollar depreciated against all the major currency as the markets dial back expectations of any fed hike in June/July. The dollar index is now trading at 94.22 levels with the Rupee trading below at 66.96 against the dollar versus 67.35 levels.
- Banking system Liquidity eased during the week to Rs 22,923 bln vs Rs 74,294 bn last week. Liquidity eased due to government spending of Rs 31,800 crores and RBI OMO Purchase of Rs 15000 Crores . Liquidity is expected to tighten in the coming week due to excise and custom duty payment on 7/8<sup>th</sup> June 2016 but we expect overall liquidity to remain close to surplus in June and July. The cut off in the ten year Government security auction came at 7.49 % levels due to cautious bidding by market participants. However, aggressive bidding was witnessed in the long end. The long end 8.13 % 2045 cut off came at 7.84 %. This long dated paper was cornered by one bidder. GOI 7.73 % 2034 came at 7.76 % levels which were cornered by 2 bidders.
- Short term rates remain range bound with the 1 months CDs trading around 6.5%-6.750% levels and 3 months around 7.10%-7.20%. Going forward, we expect short term rates to remain range bound as liquidity is expected to be comfortable. The banking system deposit has grown by 2157 billion vs credit growth of 35 billion from April 2016 onwards. This should see reduce pressure on banks rolling over the certificate of deposits on maturity.

## Portfolio Strategy

We have increased the duration of Quantum Dynamic Bond Fund (which completed 1 year of its existence in May) to 6.6 years from 4.6 years as the ten year was trading at 7.49 % levels last week. We remain bullish on bond markets due to

- The first advanced estimates by the met department points to a normal monsoon during this year. The met department has also predicted a zero percentage of drought probability. This should keep food inflation down which will allow RBI to achieve its CPI target of 5 % during the current financial year.
- US fed expected to raise rates during the course of the year and expected USD outflow due to Iran oil payment of 6 billion and FCNR B of USD 24 billion will put pressure on RBI to do more OMOs to enhance domestic liquidity.
- 25 basis of further repo rate cut from RBI if we have a good monsoon and food prices remain low.

As on 3<sup>rd</sup> June 2016, the **Quantum Dynamic Bond Fund (QDBF)** had portfolio modified duration of 6.60 Yrs with a yield to maturity of 7.55%.

**Credit Exposures:**

Staying true to its mandate of high liquidity and low credit risk; QDBF has significant majority holdings in Government securities; Treasury bills and PSU securities.
