Founded in 2006, Quantum Mutual Fund has established a strong legacy in delivering simple yet thoughtful investment solutions, tailored to meet the needs of all investors. Guided by a disciplined approach to investment and research, we are committed to safeguarding portfolios through the inevitable market fluctuations. We prioritise transparency, consistency, and a deep understanding of market dynamics. Quantum Mutual Fund is a reliable partner in their wealth creation journey.

Quantum Fundamentals

Our approach to investments is built with a focus on – People, Philosophy, Process, and Predictability of Outcomes. These aren't just buzzwords; they're the cornerstones that could help you decide where to place your trust. Through our journey, we've always put our thoughtful investors, first and strived to improve the ecosystem for investing.

People

What is the background?
What is the experience?

Philosophy

Is there a clearly defined investment philosophy across all market situations or is this an opportunistic collect AUM and ride-the-wave, "sell-what-is-hot" manager?

Process

What is the research and investment process and how reliable is it?

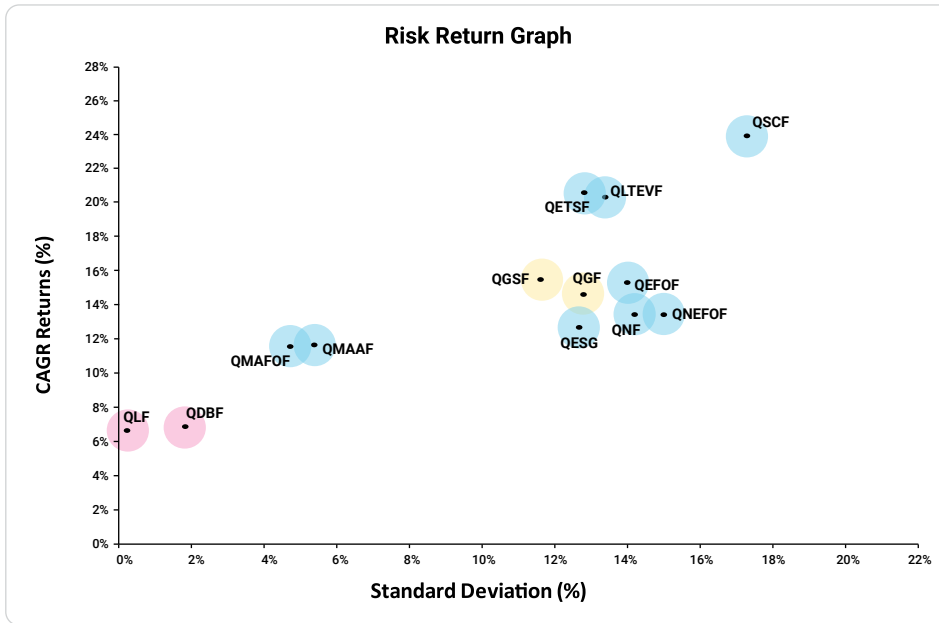

Predictability of Performance

Given the process, is the performance as predictable as it should be?

With Quantum, Predictability of Outcomes in our investments processes are within your reach. Our Unique Estimated Upside Potential chart, diligently estimated every month since April 2008, is a testament to aligning past estimations with the present figures. The Quantum Long Term Equity Value Fund's track record is an indicator of the fund's upside potential with a reasonable degree of certainty.

Quantum's Calibrated Process Driven Range of Funds

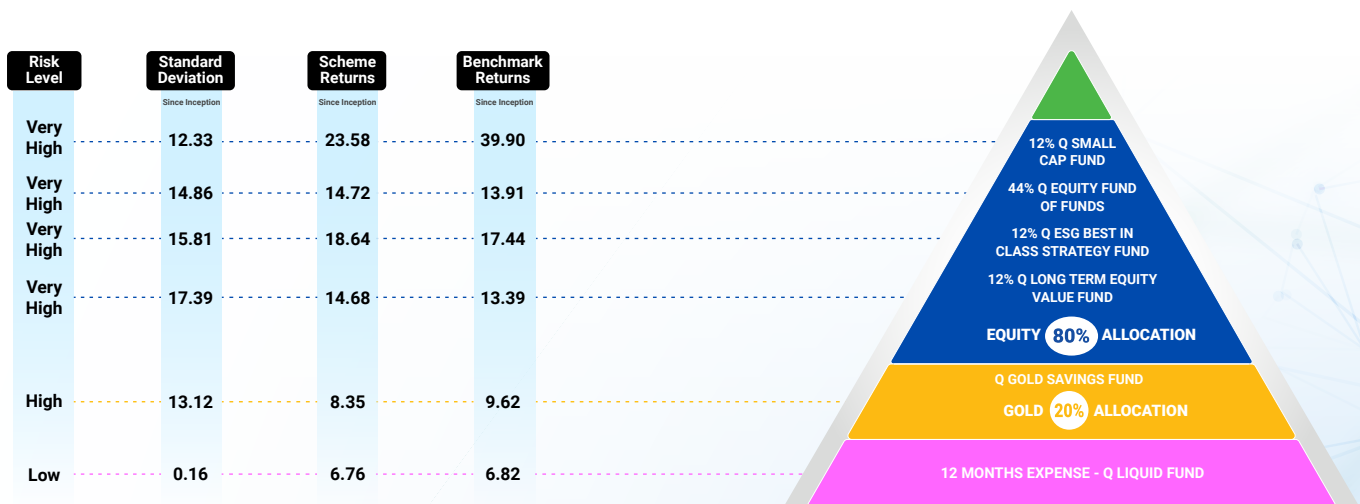

Quantum Mutual Fund is known for its simple and thoughtful approach towards investing. We provide a carefully curated range of 13 funds tailored to suit diverse investor needs. In the interest of doing what's best for our investors, Quantum has been meticulously adding funds over the years across the asset classes of Equity, Debt and Gold to create a one stop shop for all your needs.

Funds	Investment Strategy
QLTEVF & QETSF	Value Style of Investing
QESG	Environment, Social & Governance
QEFOF	Equity Fund of Fund
QMAFOF	Invests in Equity, Gold & Debt
QMAAF	Dynamic Asset Allocation between Equity, Debt & Gold

Christy Mathai
Fund Manager, Equity

Index	Performance (November 2024)
BSE Sensex	0.5%
BSE Midcap Index	0.3%
BSE Small cap	0.4%
S&P 500	5.8%
MSCI Emerging Markets Index	-3.5%
Sectoral Performance	
BSE Healthcare	-0.5 %
BSE Auto	-1.1 %
BSE Information Technology	5.8 %
BSE FMCG	-1.8 %
BSE Bankex	1.0 %
BSE Capital Goods	2.3 %
BSE Metal	-1.7 %

After 5.7% (BSE Sensex) decline in the month of October 2024, Indian markets stabilised with frontline indices such as Sensex registering growth of 0.5%. The pace of FII selling which was in the vicinity of USD 10.9bn in October has reduced in the month of November to USD 2.2bn. FII Selling was largely concentrated in large cap space and as a result mid/small cap indices fared better than large caps post the sell-off. Globally, S&P 500 and Dow Jones outperformed the BSE Sensex driven by US presidential election and hope of corporate tax cuts/strong dollar. MSCI EM Index declined by -3.5% driven by China.

A key event from market perspective was the US elections.

While it's too early to gauge the impact of Trump policies; it clearly will influence global trade and there could be few areas where India may benefit. Case in point is India IT services, who have borne the brunt of increased cost of doing business due to talent localisation in Trump previous tenure. Incrementally, higher earnings by US corporates because of the policies adopted including tax cuts may lead to higher technology spends and opportunities for Indian IT firms. The weaker rupee/stronger dollar is a solid tailwind to the IT sector as exports from India become lucrative.

Global manufacturing may see an accelerated move away from China if any extra tariffs are placed on imports from China into US. India may be one of the beneficiaries. Pharma sector could be a key beneficiary in diversion of trade from China, especially generic drug and active pharmaceutical ingredient (API) suppliers.

Quantum Long Term Equity Value Fund (QLTEVF) saw an increase of 0.89% in its NAV in the month of November 2024; Tier-I benchmark BSE 500 and Tier-II Benchmark BSE 200 increased by 0.06% and 0.11% respectively. Financial and IT Services and not owning expensive consumer staples also helped our performance. Auto and not owning industrials were drag on portfolio. During the month, we continued to add to financial space, mostly banks and insurance. Cash in the scheme at the end of month stood at 15.3%.

The recent earnings season witnessed steep earnings cuts in quite a few sectors. The key sectors which led the bulk of decline were in Energy, Cement, consumer discretionary and Insurance. The margin expansion witnessed last year, driven by lower input cost has clearly moderated and current EBITDA growth year-over-year is negative, highlighting margin concerns.

Large components within Energy sector reported poor earnings due to weak GRM (gross refining margins); infra focused themes are impacted due to lack of capex spends by government. Heightened competition coupled with slowdown in consumptions continues to put pressure on sectors such as paints/cement/fmcg. Going forward, we expect a gradual recovery in earnings as we progress through the year driven by cyclical recovery in many of these sectors.

Key updates w.r.t to some of portfolio companies/sectors in the month gone-by:

- For the lending companies, there has been an uptick in slippages and some of the companies have increased provision towards the same, resulting in lower profitability. Weak asset quality is primarily concentrated in MFI (Micro-finance) and segments within unsecured such as certain categories of personal loans and credit cards. Clearly for larger private banks, segments such as MFI, credit card and personal are small as % of total advances. And the quality of books written by the large banks remains superior compared to other players. With normalizing credit costs, we expect differentiation between banks with better underwriting to be more evident.
- In one of our portfolio companies in utility space there was a development wherein APM (Administered Pricing Mechanism) gas allocation to the industry was reduced, impacting profitability. While this is a hit to profitability, incrementally we expect most of these players to gradually start increasing the pricing to end consumers. Even with reduced APM gas supply the blended pricing to end consumer remain attractive vs competing fuel.

In our view, valuation despite the market correction in the past two months remains elevated. Thus, we are cautiously deploying the cash in the fund. The key near term risks to watch out for are slowing domestic economy (which should pick up in the second half post certain policy intervention) and factors such as weaker global macros and geopolitical tension across the middle east. Thus, investors should maintain the right asset allocation at all points in time and prudently invest towards equity.

Pankaj Pathak

Fund Manager, Fixed Income

In November the debt market was **largely influenced by the US elections**, which introduced considerable macroeconomic uncertainties. President elect Donald Trump's inclinations towards higher trade tariffs and lower taxes have pushed inflation expectation higher and raised fiscal risk in the US. This sparked what became known as the **"Trump trade"**, marking a sharp rise in long term US treasury yields and stronger Dollar.

During the month, **the 10 US treasury yield** surged from approximately 3.6% in mid-September to a high of 4.45%, before easing by 20 basis points as concerns related to the election began to fade. **The Indian 10-year benchmark government bond yield also moved up to 6.87%**

during the month. However, the trump trade fizzled out somewhat towards the end of the months pulling down bond yields from their monthly peak. At monthly closing both the **US treasury and the Indian bond yields ended lower compared to the previous month.**

Decline in Indian bond yields at the month end was also influenced by the Q2 GDP number which came at 5.4%, significantly lower than broader market expectation of 6.7%. The weak GDP performance has heightened speculation of a policy rate cut and liquidity easing from the RBI, potentially **shifting focus from inflation control to growth support in the coming quarters.**

Corporate bond yields saw a slight uptick, but the **spread between G-sec and corporate bonds** of corresponding maturities widened significantly by the month-end, on account of easing G-sec yields.

In the money market, **T-bill rates** for the 6-month and longer segments edged up, closing the month at 6.65%, while rates for the 3-month segment declined to 6.47% due to the prevailing liquidity conditions and lower T-bill supply. Meanwhile, the 3-month **AAA PSU CP/CD rates remained in the range of 7.17%-7.20%.**

Although **banking system liquidity stayed in surplus** through most of November (averaging Rs1.38 lakh crore), much of that was due to pick up in government spending. While the **core liquidity declined significantly** from surplus of ~Rs5 lakh crore in October, 2024 to Rs. 1.39 lakh crore by November 22, 2024. The decline in core liquidity surplus was primarily due to the RBI's sales of foreign exchange and seasonal pick up in cash withdrawals.

Liquidity condition is **expected to tighten further** in coming months as cash withdrawals tend to pick up during the January to March quarter. FPI selling could further tighten the liquidity condition.

With **moderation in credit growth, the gap between bank credit and deposits is narrowing.** This trend suggests that the pressure for CD issuances by banks could ease in the coming months, potentially narrowing spreads between CPs/CDs and T-bills, provided liquidity remains favorable.

Outlook

The RBI's shift to a "neutral" stance in the last monetary policy can be seen as a step towards eventual rate cuts. **With GDP growth showing signs of sluggishness**, bets on potential rate cuts have increased further. The RBI might wait for the recent spike in food prices to cool-off, before start cutting rates. **We would expect rate cuts to start from February 2025.** Nevertheless, **the RBI may announce some liquidity easing measures including a potential CRR cut in the December monetary policy.**

Globally, focus will be on the US payroll report, with a weak print potentially boosting December rate cut expectations. Leadership changes in the US and CPI data from the US and India will also shape market sentiment.

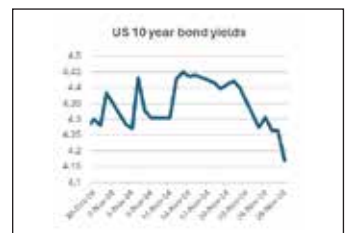

We maintain our medium-term positive outlook (refer Bull Case Revisited) on long-term bonds considering -

- Continued strengthening in demand from insurances companies, pension and provident funds
- India's inclusion in the global bond indices to continue to add to the demand
- Potential Increase in demand from banks owing to RBI's proposed LCR norms (Liquidity Coverage Ratio)
- Government's focus on fiscal consolidation and debt reduction
- Declining domestic inflation and anticipated rate cuts by the RBI
- Global Synchronized Rate Cutting Cycle
- Strong External Balances

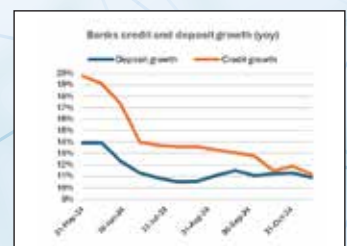

Intensifying geopolitical tensions, however, could be a risk. This could lead to a surge in crude oil prices and prolonged disruptions in global supply chains.

Given the above factors, we expect the bond yields to go down (prices to go up). In this declining interest rate environment, investors with medium to long investment horizon, should consider dynamic bond funds. These funds can allocate to long-duration bonds while keeping flexibility to adjust portfolio position if market conditions change. This adaptability allows investors to remain invested for a longer period.

Investors with a short-term investment horizon and with little desire to take risks can invest in liquid funds which invest in government securities and do not invest in private sector companies which carry lower liquidity and higher risk of capital loss in case of default.

Chirag Mehta

Chief Investment Officer

The bull market that commenced following the rate cut announcement in the latter half of September encountered significant challenges in November. Shortly after gold reached an all-time high of \$2,790 per troy ounce, it found difficult to maintain the elevated level and began to experience a correction. The gold market underwent considerable volatility during November, primarily influenced by critical events such as the U.S. elections, the Federal Reserve's rate cut announcement, and various geopolitical developments.

Following former President Trump's electoral victory, the gold market experienced a notable decline, losing approximately 3% the day after the announcement of the results. This downward trend continued, with a further decrease of 5.3% one week later, and by November 14, the price had fallen by 6.6%. This situation

mirrors the initial phase of Donald Trump's first term, during which gold prices also declined for the first 6 to 8 months, ultimately decreasing by around -12% where it bottomed. However, as his policies began to take shape and plans were implemented, gold prices gradually increased, rising by approximately 49% by the end of his term.

Despite Trump's views on matters such as "America First," strict tariffs, and support for cryptocurrencies, the implementation of these policies may pose challenges for his administration, potentially leading to a negative impact on the U.S. dollar, which could be perceived as isolating and impacting other nations increasing the need to diversify away from the dollar dominance. In this context, it is reasonable to anticipate that gold may benefit in the long term, gradually appreciating as time progresses and developments unfold.

The Federal Reserve has been reducing interest rates over the past few months, implementing cuts of 50 basis points in September and 25 basis points in November, as part of its strategy to support employment and growth while inflation trends lower towards its target of 2%. During the press conference following the November meeting, Federal Reserve officials conveyed an increasing confidence in the economic outlook, particularly concerning inflation and the labour market. Policymakers noted that inflation is gradually approaching the Fed's target of 2% and described the current labour market as robust. However, market expectations regarding potential future rate cuts remain mixed, with the CME's FedWatch tool indicating a 63.1% probability of an additional rate reduction at the forthcoming December meeting.

While inflation appears to be under control, the Consumer Price Index (CPI) in the United States rose from 2.4% to 2.6%, marking the first increase in seven months. The higher inflation print contributed to a strengthening of the U.S. dollar in November as it signalled that the Fed may want to be cautious in reducing rates until the economy isn't plummeting. Although this short-term effect negatively impacted assets such as gold, the long-term implications may differ. With the new administration under President Trump planning to implement higher tariffs and increase domestic production, inflation as well as growth could be significantly affected. In a scenario of slowing growth and rising inflation, the conundrum may compel Fed to reduce rates despite inflationary pressures, this will bode well for gold.

The U.S. Bureau of Labor Statistics reported the addition of 146,000 jobs in November, representing a healthy addition following a disappointing report in October. This stability in the labour market has positively influenced the U.S. dollar, contributing to its appreciation against other currencies. The relationship between employment figures and currency strength highlights the broader economic context, as a resilient labour market may impact future monetary policy decisions by the Federal Reserve. Overall, there remains a demand for workers despite ongoing price pressures and elevated borrowing costs. This development is encouraging for Federal Reserve officials, who no longer perceive the labour market as a source of inflation and are now focused on preserving employment opportunities.

Amidst the ongoing geopolitical conflicts in the Middle East and the situation between Ukraine and Russia, a green light for Ukraine to utilize U.S. missiles raises questions regarding the U.S. stance on international conflicts. The threat of imposition of higher tariffs on Russia, coupled with increased support for Ukraine, may exacerbate geopolitical tensions and potentially pave the way for further conflict. Such developments could result in increased volatility and risk associated with the U.S. dollar, which, in turn, may create a favourable environment for assets like gold.

Overall, while gold has experienced volatility and a decline in the short term, it remains a robust asset from a long-term perspective. As the policies and implications introduced by the new U.S. administration unfold, it will be intriguing to observe their effects on the U.S. dollar and other financial assets. Considering the prevailing geopolitical and economic developments, the outlook for gold remains positive.

In conclusion, investors may find it prudent to consider gold as a strategic component of their portfolios, particularly in times of uncertainty. The historical resilience of gold in times of stress, combined with the potential for increased market volatility, underscores its relevance in a diversified investment strategy. As global dynamics continue to evolve, gold's role as a diversifier against economic instability and currency fluctuations is likely to be reaffirmed.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Long Term Equity Value Fund - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ##As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006. Returns are net of total expenses

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Equity Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses.

QUANTUM GOLD FUND

An Open Ended Scheme Replicating/Tracking Gold

Fund Details (as on November 30, 2024)

Category of Scheme Exchange Traded Fund

Investment Objective

The Investment Objective of the Scheme is to generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold. There is no assurance that the Investment Objective of the Scheme will be achieved.

Know More

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022.

Fund Details (as on November 30, 2024)

Category of Scheme Exchange Traded Fund

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the Index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

Scheme Name	Quantum Multi Asset Funds of Funds	Quantum Nifty 50 ETF Fund of Fund
Type of Scheme	An Open Ended Fund of Funds Scheme Investing in schemes of Quantum Mutual Fund	An open ended fund of fund scheme investing in units of Quantum Nifty 50 ETF
Inception Date	July 11, 2012	August 05, 2022
Investment Objective	The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise / that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There is no assurance that the investment objective of the scheme will be achieved.	The investment objective of the Scheme is to provide capital appreciation by investing in units of Quantum Nifty 50 ETF - Replicating / Tracking Nifty 50 Index. There is no assurance that the investment objective of the Scheme will be achieved.

Scheme Name	Quantum Gold Fund	Quantum Nifty 50 ETF
Type of Scheme	An Open Ended Scheme Replicating/Tracking Gold	An Open Ended Scheme Replicating /Tracking Nifty 50 Index
Inception Date	February 22, 2008	July 10, 2008
Investment Objective	The Investment Objective of the Scheme is to generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold. There is no assurance that the Investment Objective of the Scheme will be achieved.	The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.
Fund Manager	Mr. Chirag Mehta (Since June 1, 2024)	Mr. Hitendra Parekh (Since July 10, 2008)

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.	Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Application Amount for Fresh Subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.	Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Minimum Additional Amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.	Beta	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
Yield to Maturity	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.	AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.	Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.	Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub categories.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE 200, BSE 500, 10-Year Gsec.	Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
Portfolio Turnover Ratio	Portfolio Turnover Ratio is the percentage of a fund's assets that have changed over the course of a year.		
Tracking Error	It is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better.		
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
