QNF	Passive Equity ETF
QNFOF	Passive Equity ETF Fund of Fund
QGF & QGSF	Invests in Gold & Gold ETF
QLF & QDBF	Invests in sovereign debt securities, PSU Bonds, etc.

Note: Graph is based on Since Inception CAGR Return & Standard Deviation data. Quantum Small Cap Fund and Quantum Multi Asset Allocation Fund are plotted based on theoretical risk return profile. Data as on August 31st, 2024. Past Performance may or may not be sustained in the Future. The above performance is of the Direct Plan. To view complete performance for the schemes refer from page 39.

Quantum Fundamentals

Our approach to investments is built with a focus on – People, Philosophy, Process, and Predictability of Outcomes. These aren't just buzzwords; they're the cornerstones that could help you decide where to place your trust. Through our journey, we've always put our thoughtful investors, first and strived to improve the ecosystem for investing.

With Quantum, Predictability of Outcomes in our investments processes are within your reach. Our Unique Estimated Upside Potential chart, diligently estimated every month since April 2008, is a testament to aligning past estimations with the present figures. The Quantum Long Term Equity Value Fund's track record is an indicator of the fund's upside potential with a reasonable degree of certainty.

The Quantum Edge: 12|20:80 Asset Allocation Strategy

Each fund that Quantum has launched forms a building block in our well thought-out and time-tested 12|20:80 Asset Allocation Strategy (Barah-Bees-Assi). There are three crucial building blocks within this strategy with underlying assets in Equity, Debt and Gold which helps you achieve your long-term goals and ride the market swings with peace of mind.

A Simple One Stop Solution for your Lifelong Investment and Financial Needs -
No matter what happens in the world around you!

George Thomas

Fund Manager, Equity

After the recent run up, Indian markets remained range bound in August; BSE Sensex registered a growth of ~1%. BSE Midcap Index advanced by 1.0% & BSE Small cap Index advanced by 1.4%.

Global markets performance continue to be in positive zone with S&P 500 advancing by 2.4%, majorly supported by US Tech majors. MSCI Emerging Markets Index advanced by 1.6% during the month with China being a drag.

Quantum Long Term Equity Value Fund (QLTEVF) saw an increase of 2.2% in its NAV in the month of Aug 2024; Tier-I benchmark BSE 500 and Tier-II Benchmark BSE 200 increased by 1.0% and 1.1% respectively. Among sectoral indices, IT and Pharma recorded better performance. Rally in IT was supported by an anticipation in

demand revival as rate cuts are expected in the near term. Pharma continues to benefit from a decent launch pipeline along with favorable pricing environment in US market. Portfolio holding within utilities, IT and healthcare helped our performance; Financials and absence of holdings in Consumer Staples negatively contributed to the performance. During the month, we continue to trim in consumer discretionary (auto), pharma, utility and a select NBFC (Non-Banking Financial Company) due to valuation reason. Though the month saw more trims than addition, we have re-allocated a portion of the capital to private sector banks. Cash in the scheme stood at 14.0%.

As shown in the below graph, the recently concluded quarter saw modest rise in revenue and profit growth (<10%) for the broader universe, as can be seen in the growth trends of BSE 500 aggregate. While margin expansion supported earnings growth in most part of FY24, earnings growth from hereon should be supported by an improvement in demand environment. An above average monsoon and moderating inflation is likely to support demand pickup in rural economy and mass segments. However, above average valuations in most pockets suggest moderate return possibility in the medium term.

Data source: Ace Equity; Data as of June – 2024 quarter

During the month, Supreme Court allowed states to levy royalty on minerals retrospectively, starting from April 2005. While state wise royalty rates are yet to be finalized for most states, prohibitive rates could adversely impact the industry growth, especially in commodities where pricing is decided based on global cost curve. Among other key portfolio related developments, the promoter of a gas utility company has announced a scheme of amalgamation with its subsidiary (Majorly into City Gas Distribution) and parent company (Gas distribution and exploration company). The amalgamation would simplify the corporate structure and aid in unlocking synergy from the related businesses of the group. The major value unlocking would emerge from removal of holding company discount (Market generally discounts value of subsidiary company for the limited control).

Key macro indicators continue to remain reasonable during the month. Two-wheeler volume growth remain reasonable while passenger vehicles and commercial vehicle sales have seen moderation. Residential sales in top 8 cities for 1QFY25 remain buoyant with a growth of ~11% yoy (Source: PropEquity), on the back of a strong base quarter. Cement volume remain subdued and is expected to pick up as the monsoon recedes. Peak power demand clocked a reasonable growth of ~8% in July, 2024. GST collection clocked a growth of ~10%. Non-food credit growth has remained reasonable at ~15%, majorly supported by retail and agriculture. CPI inflation is expected to remain moderate as the good monsoon would keep a check on food prices. CPI inflation for July stood at ~3.5% yoy, partly supported by favorable base effect. Global dynamics suggest a possibility of moderation in crude oil prices. Globally, Fed has indicated rate cuts in the near term which could trigger rate cuts in other parts of the globe.

The key near term risks are emanating from global macros such as global growth/inflation trajectory and central bank policies around these. While India continues to enjoy favorable macros, valuation remains on the higher side. Thus, investors should moderate their return expectations; maintain the right asset allocation and prudently invest towards equity.

Pankaj Pathak

Fund Manager, Fixed Income

The Indian bond market remained relatively stable in August 2024. The 10-year government bond yield remained in a tight range between 6.85% and 6.92% for the entire month and closed the month at 6.86% vs 6.92% in the previous month.

Money market rates too remained relatively stable in August, after a sharp decline in July. The 3-month Treasury bill yield edged up from 6.62% at the end of July to 6.64% at August end. Despite the drop in treasury bill yields, short-term CD/CP rates moved up during the month as yield on AAA PSU CPs rose to about 7.25% vs 7.15% in the previous month.

Liquidity conditions continue to ease:

Banking system liquidity eased during the month as the average daily liquidity surplus increased to Rs 1.5 trillion as against average of Rs 1 trillion surplus in July. This was mainly due to increased government spending during the month.

Core liquidity, which excludes the government cash balance, too remains in surplus of around Rs 3 trillion. We expect the excess liquidity to fade gradually during the second half (of FY25) as cash withdrawals picks up during the festive season.

Global economies and monetary policy expectations:

Amid easing inflation and a weakening labor market, expectations of interest rate cuts from the Federal Reserve led the 10-year U.S. Treasury yields to drop from 4.14% at the end of July 2024 to a low of 3.79% at the start of the month. It closed the month at 3.91%

The Fed Chairman Jerome Powell supported the rate cut calls in his Jackson Hole speech as he said - *"The upside risks to inflation have diminished. And the downside risks to employment have increased"* and *"the time has come for policy to adjust"*.

The US treasury market is now pricing for 3-4 rate cuts in 2024. Fed rate cutting cycle is expected to continue in 2025 as well with fed funds rate falling to 3.0%-3.25% by end of 2025 from current levels of 5.25%-5.50%.

Most of the other major central banks - Bank of England, European central bank, Bank of Canada too are on monetary easing cycle. Meanwhile, Bank of Japan hiked interest rates in July and is expected to hike more in the remainder of 2024.

Overall, the external policy environment has turned favorable for the domestic monetary policy and the bond market.

Positive long-term inflation outlook:

Headline CPI dropped to 3.5% in July from 5.1% in June, largely due to a favorable base effect. Food CPI also moderated to 5.4% in July from 9.4% in June, despite a sequential rise. The Core CPI which excludes the volatile food and fuel prices, stood at 3.4% in July. As the favorable base effect fades by October, the headline CPI inflation will move above 4.5% again.

As of August 27, 2024, cumulative rainfall for the country as a whole was 5.6% above the Long Period Average (LPA), with the sown area 1.9% higher than last year. Sowing of key crops like paddy, pulses, and millets increased, with pulses up by 5.7%. Favorable monsoon and increased sowing are expected to boost Kharif production and ease food prices, potentially bringing inflation closer to the RBI's 4% target by early next year. The recent decline in crude oil prices will also help in lowering inflation.

Outlook:

With key events behind us, the market will switch back to demand supply dynamics in the bond market and emerging inflation trend.

We maintain our positive stance on long-term bonds in view of **the structural shift in the demand supply balance and the cyclical turn in inflation and monetary policy globally.**

Growing demand for long-term bonds by domestic insurers and pension funds, along with foreign investors' index-driven inflows, will bolster the bond market. Furthermore, easing monetary policies in advanced economies should aid a downward move in domestic bond yields as well.

In this declining interest rate environment, investors with medium to long investment horizon, should consider dynamic bond funds. These funds can allocate to long-duration bonds while keeping flexibility to adjust portfolio position if market conditions become unfavorable. This adaptability allows investors to remain invested for a longer period.

Investors with a short-term investment horizon and with little desire to take risks, can invest in liquid funds which invest in government securities and do not invest in private sector companies which carry lower liquidity and higher risk of capital loss in case of default.

Chirag Mehta

Chief Investment Officer

The first half of August was buoyed with rising geopolitical tensions, global uncertainty surrounding Middle East war, Russia-Ukraine re-escalation and US elections, while the second half showed reduced uncertainty mainly with respect to the timing of rate cuts amidst a backdrop of signs of slowing inflation. This confluence led to increase in price of the precious metals initially moving up by more than ~\$ 80 touching a fresh all-time peak of \$2525 per ounce, to give up some gains on back of strong GDP and slowing inflation data to end August at \$2503 per ounce, still a gain of ~2.4% for the month. Domestic gold prices also moved up by ~2.4% mainly due to global gold price.

The latest inflation trend as indicated through US Personal Consumption Expenditures (PCE) Price Index, Fed's preferred gauge, showed an increase of 2.5% y-o-y in July similar to June. While Core PCE Price Index has stabilized at 2.6% since last two months. However, the headline US CPI shows a small increase of 0.2% from

the previous month to 2.9% yoy. Also the Core CPI, which excludes volatile food and energy prices shows a similar increase of 0.2% from the previous month to 3.2% yoy.

Along with that the second estimate of second-quarter GDP growth data, revealed unexpected strength in the U.S. economy as the actual figure came in at a robust 3.0%, above economists' predictions of a 2.8% annualized growth rate surpassing expectations and demonstrating resilience, thanks to stronger consumer spending.

While the growth looks fine in the rear-view mirror, there are early indication of some softness creating the need for some wiggle room at the Fed. The labour market softening seems to continue, the Nonfarm payrolls rose by 114,000 in July, lower than the average monthly gain of 215,000 over the prior 12 months, increasing the unemployment rate higher to 4.3%.

Also, the leading economic indicator like US manufacturing sector weakened further with the US ISM Manufacturing PMI falling to 46.8 in July, below 48.5 in June. This creates a need for a delicate balance at the Fed and will sooner rather than later compel Fed to lean in favor of growth as policy rates remain restrictive to meaningfully impact economy.

Over the medium term, one of the factors that will adversely impact growth amidst high rates is the burgeoning interest costs on the government and the households. Government debt has surpassed \$35 trillion now and shows no signs of reducing over the next few years. The continuing deficits and unsustainable debt will eventually lead to losing confidence in the dollar. This is one of the major worries besides political uncertainty to see dollar slide to ~\$101 from ~\$104 during the month of August. While the above factors adversely the US currency, it is positive for precious metal gold due to its positioning as an alternate / diversifier to fiat currencies.

The Fed, in its July policy announcement, kept the policy rate unchanged in the range of 5.25% to 5.5%, in line with street expectations. However, Fed chair Powell's recent speech at Jackson hole portrayed a clear dovish narrative as he didn't mince words to indicate a rate cut at the September meeting; "The time has come for policy to adjust. The direction of travel is clear, and the timing and pace of rate cuts will depend on incoming data, the evolving outlook, and the balance of risks. We will do everything we can to support a strong labor market as we make further progress toward price stability." The recent anecdotal data have been also supported the same, reinforcing a rate cut probability to ~99% for September month with ~65% probability of 25bps cut and ~34% probability of 50 bps rate cut. We believe they would do 25 bps and not 50 bps as the higher quantum would indicate that there is something terribly wrong with the economy and they will want to manage expectations appropriately.

Global gold ETFs experienced their strongest month since April 2022, attracting US\$3.7bn in July, the third consecutive monthly inflow; all regions saw inflows with western funds leading the way. Domestic gold ETFs on the other hand also saw inflows of 1337.35 crores in July 2024 mainly aided by changes announced in the recent budget which effectively shortens the long-term investment qualifying time period and lowered the associated tax rate which makes the investment landscape for gold ETFs more equitable and attractive, in addition to making gold available cheaper.

The trend of investments into gold and diversification of reserves continues. We believe this trend is likely to continue this year amid geopolitical uncertainties in middle east, elections in Europe, US and major economies, central bank buying to diversify its reserves and with continued fragmentation in world economy, would continue to support gold prices.

We have seen the ups and downs surrounding rate cuts expectations in the US before which leads to volatility in gold prices and this time is no different. However, we are closing in on the beginning of rate cuts in the US primarily driven by growth concerns and high interest costs impacting government balances. This would continue to support gold prices in addition to geopolitical worries capping downsides in gold. Any downsides in gold due to volatility in rate expectations would be an opportunity for investors to build their gold allocation. Medium term outlook for the precious metal looks promising given the imminent turn in US interest rate cycle, and confluence of macro-economic factors impacting growth, markets and hence central bank action will start supporting gold from here on.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Long Term Equity Value Fund - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ##As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006. Returns are net of total expenses

#BSE 200 TRI, ##BSE Sensex TRI

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Equity Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses.

Know More

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022.

Fund Details (as on August 31, 2024)

Category of Scheme Exchange Traded Fund

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the Index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

Inception Date (Date of Allotment)

July 10, 2008

Benchmark Index

Scheme Name	Quantum Gold Fund	Quantum Nifty 50 ETF
Type of Scheme	An Open Ended Scheme Replicating/Tracking Gold	An Open Ended Scheme Replicating /Tracking Nifty 50 Index
Inception Date	February 22, 2008	July 10, 2008
Investment Objective	The Investment Objective of the Scheme is to generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold. There is no assurance that the Investment Objective of the Scheme will be achieved.	The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.
Fund Manager	Mr. Chirag Mehta (Since June 1, 2024)	Mr. Hitendra Parekh (Since July 10, 2008)
Benchmark	Tier I Benchmark - Domestic Price of Physical Gold	Tier I Benchmark - Nifty 50 TRI
Entry Load	Not Applicable	Not Applicable

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.	Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Application Amount for Fresh Subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.	Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Minimum Additional Amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.	Beta	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
Yield to Maturity	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.	AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.	Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.	Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub categories.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE 200, BSE 500, 10-Year Gsec.	Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
Portfolio Turnover Ratio	Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.		
Tracking Error	It is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better.		
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield
